Covid Map

Goal: When people check the map, they can see the “heat map” of covid cases in the state of massachusetts.

- Learn the number of hospitalizations
- Learn number of deaths
- Learn number of people in recovery

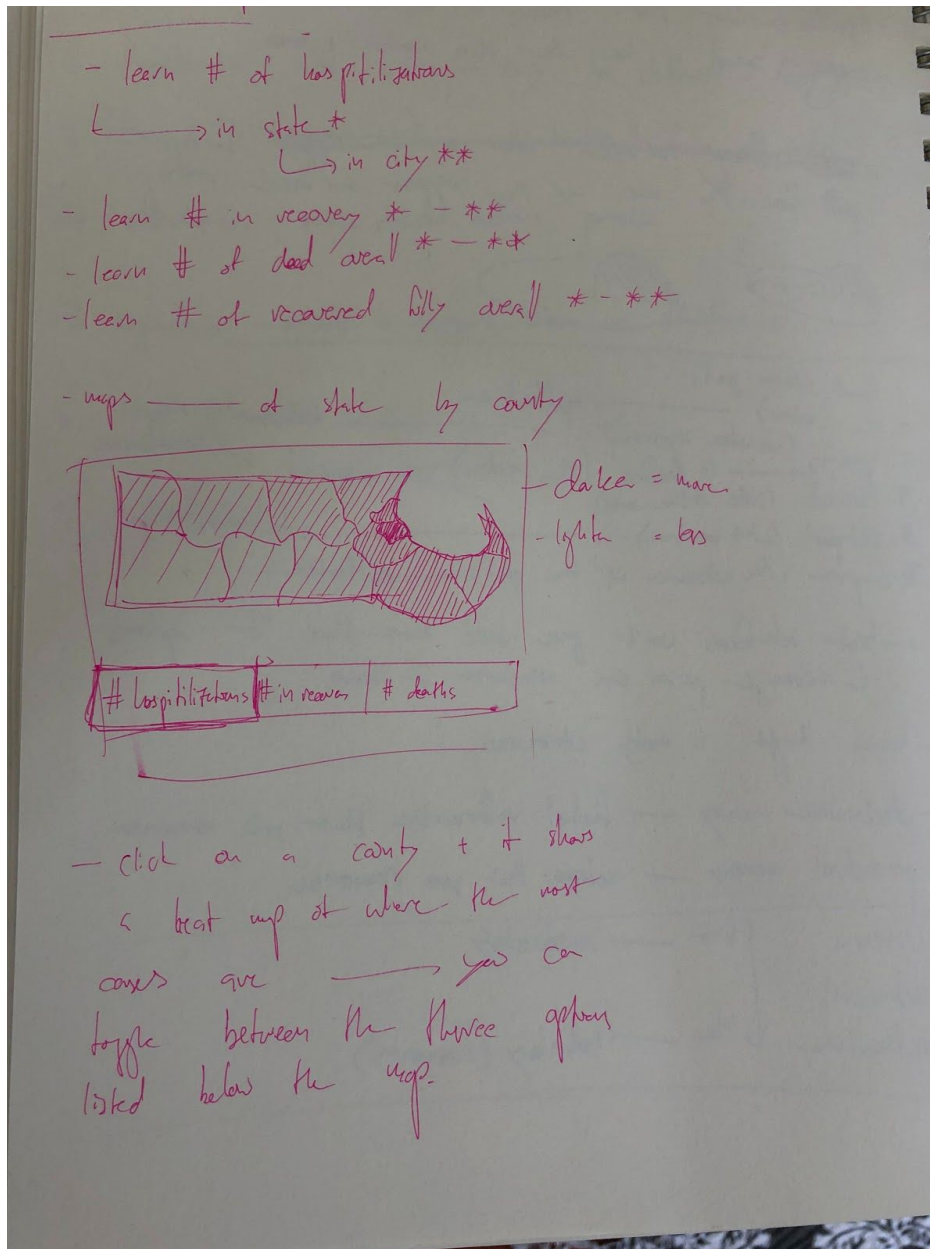

Screen opens to the map of Massachusetts.

Divided by county possibly?

One is able to click on a county and see the individual heat map for that county

On the bottom of the page, there would be a list of hospitalizations, recovery, and deaths

- Darker on the map means COVID is worse in that area
- There is a key on the side showing the differences in worsening

- On this screen, it needs to be revised since it is sideways and not the way you would hold a phone
- Maybe it opens to a more zoomed in map based on where you live?
-
